

# onQloud Managed Backup

Datasheet

## Why Managed Backup?

A cross-platform cloud backup solution that is simple to manage for complete data protection

 Centralized management

 Bring your own storage

## FEATURES

### Administration Portal

From a single web console, you can monitor and control all backup and restoration jobs, users, endpoints, and storage.

### Bring your own storage

AWS, Wasabi, Backblaze B2, or the onQloud storage supported by AWS and Wasabi are all options.

### Total Backup Defense

Immutability, encryption, and two-factor authentication can protect your backups from ransomware and unauthorized access.

### Quick, effective, and trustworthy backups

Recoverability is guaranteed with restoration verification, storage is kept to a minimum, and your backup strategy is optimized

### Flexible fees and licenses

a pay-as-you-go license with a high cumulative discount curve.

### 24/7/365 Technical Support

If you run into any technical problems, our support staff will make sure you get a timely and accurate response.

### Compatibility across platforms

Windows, Mac, Linux, Hyper-V, VMware, Microsoft 365, G-Suite, MS SQL Server, and MS Exchange are all platforms that we support.

## SUPPORTED SYSTEMS
